EDUCATION

The University of Texas at Dallas December 2027
Bachelor of Science, Computer Information Systems and Technology GPA 3.1

CERTIFICATION & TECHNICAL SKILLS

- **Certification:** Google Cybersecurity Professional Certificate
- **Cloud & Identity:** Azure, AWS, Active Directory, Group Policy, RBAC, Managed Identity
- **Security Platforms:** Microsoft Sentinel, Defender for Cloud, Wazuh, Azure Monitor, Sysmon
- **Security Concepts:** MITRE ATT&CK, CIS Benchmarks, vulnerability remediation, system hardening, incident response
- **Scripting & Systems:** KQL, Python, Bash, Azure CLI, Linux, Windows Server, GitHub, Excel, Office, PowerPoint

PROFESSIONAL EXPERIENCE

Cybersecurity Analyst (Contract) July 2026 - Present
Asane Technical Consultation, Dallas, Texas

- Triaged security alerts, correlated logs to distinguish threats from false positives, and documented findings
- Integrated Azure and VPS security logs into Microsoft Sentinel to support cross-system threat investigations using KQL
- Developed KQL analytics rules to detect privilege escalation, logging changes, and suspicious activity
- Hardened VPS infrastructure through firewall rules, SSH restrictions, and patching to reduce attack surface
- Documented alert-review, escalation, and containment procedures to guide consistent incident response

IT Technician October 2024 – January 2026
Bhabhi Boutique, Plano, Texas

- Managed user access across 4 business platforms, applying least-privilege principles to limit exposure
- Enforced credential hygiene practices across accounts and devices to reduce credential misuse
- Troubleshot device and network issues and configured business software to maintain reliable access to systems

PROJECTS

AI-Augmented Alert Triage Pipeline| GitHub July 2026

- Automated incident review every 15 minutes to prioritize alerts, track evidence, and reduce manual review
- Removed hardcoded credentials by configuring managed identity access to Key Vault and Cosmos DB
- Corrected a misconfigured API endpoint and successfully reprocessed all 29 incidents that had failed enrichment
- Built a dashboard for analysts to approve, reject, or flag AI-generated classifications before any action

Security Information & Event Management Lab| GitHub April 2026

- Deployed a Wazuh SIEM with Sysmon and Defender integration to monitor and investigate Linux/Windows alerts
- Wrote custom detection rules and assessed vulnerabilities, malware exposure, and system hardening
- Investigated, remediated, and verified vulnerability findings end-to-end using Wazuh's vulnerability report
- Documented alert findings and remediation steps to support investigation follow-up

Azure Cloud Posture Assessment | GitHub June 2026

- Raised cloud secure score from 4% to 92%, reaching 68 of 81 CIS Azure Foundations controls
- Increased Microsoft Cloud Security Benchmark results to 55 of 63 controls passed
- Remediated public storage exposure, unrestricted remote-access ports, and excessive administrator permissions
- Deployed 2 Azure Policy guardrails and a CLI script to detect and remediate storage and NSG misconfigurations

Active Directory & IAM Lab | GitHub May 2026

- Simulated an enterprise Windows domain, building group-based access control for a department file share
- Centralized user authentication and security-policy enforcement across domain-joined systems
- Enforced domain-wide password and lockout policy via Group Policy, including a 12-character minimum password and lockout after 3 failed attempts

AWS Cloud Security Lab | GitHub May 2026

- Configured an EC2 instance with an IAM role granting read-only S3 access to simulate limited application permissions
- Configured VPC and security group controls to restrict inbound traffic to required services
- Separated admin/user IAM accounts, blocked public S3 access, and enabled CloudTrail management-event logging
